

Patch and Vulnerability Self-Check

Ten questions to find the gaps before an attacker does

Answer each one honestly. Every "no" is a gap worth closing, and a good place to start.

	YES	NO
1. Do you know every device that connects to your network, including phones, printers, and other equipment?	<input type="checkbox"/>	<input type="checkbox"/>
2. Is every computer and server installing security updates on a regular, managed schedule?	<input type="checkbox"/>	<input type="checkbox"/>
3. Do you confirm that updates actually installed, rather than assuming they did?	<input type="checkbox"/>	<input type="checkbox"/>
4. Is every device on a currently supported system, with nothing left running past its end-of-life date?	<input type="checkbox"/>	<input type="checkbox"/>
5. Is firmware kept current on routers, firewalls, printers, and other hardware?	<input type="checkbox"/>	<input type="checkbox"/>
6. Are mobile devices that touch company data managed and kept up to date?	<input type="checkbox"/>	<input type="checkbox"/>
7. Have risky or unnecessary network protocols been identified and switched off?	<input type="checkbox"/>	<input type="checkbox"/>
8. Have default passwords been changed on every device and piece of equipment?	<input type="checkbox"/>	<input type="checkbox"/>
9. Do you regularly scan for known weaknesses, not just rely on automatic updates?	<input type="checkbox"/>	<input type="checkbox"/>
10. If a serious flaw were announced today, would you know how fast you could find and fix every affected device?	<input type="checkbox"/>	<input type="checkbox"/>

How did you score?

8 to 10 yes . A strong foundation. Keep it consistent and verified.

5 to 7 yes . Real gaps an attacker could use. Worth closing soon.

Under 5 . Serious exposure. This is the moment to get help.

Not sure on a few of these? We can run the full check for you.
